PROFESSIONAL SUMMARY

Results-driven Senior Engineer targeting the Looking for a Distributed Systems Engineer with Java, Kafka, and Kubernetes at Stripe position at Hiring Company. Brings deep expertise in Apache Kafka, Java, Kubernetes, with a proven track record of scaling low-latency backend infrastructure, optimizing distributed data pipelines, and delivering resilient microservices.

TECHNICAL SKILLS

Languages: Java, Python, Go, SQL, TypeScript, Bash

Distributed Systems & Messaging: Apache Kafka, gRPC, RabbitMQ, Redis, Event-Driven Architecture, Microservices

Cloud & Infrastructure: Kubernetes, AWS (EC2, S3, ECS, Lambda), Docker, Terraform, CI/CD (GitHub Actions)

Databases & Storage: PostgreSQL, MySQL, MongoDB, DynamoDB, Elasticsearch

Engineering Practices: System Design, REST APIs, Unit/Integration Testing, Distributed Tracing, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer - Nexus Cloud Technologies *Jan 2022 - Present | San Francisco, CA (Remote)*

* Architected and deployed a multi-tenant event streaming pipeline using Apache Kafka processing 450M+ events/day with 99.99% availability.
* Led team of 5 engineers in migrating core Kubernetes services across AWS regions using Terraform and zero-downtime blue/green deployments.
* Refactored monolithic ingestion service into Go-based microservices, slashing p99 API response latencies from 320ms to 42ms.
* Engineered distributed caching layer with Redis Cluster, reducing RDS database read loads by 68% during peak traffic spikes.

Software Engineer - Stratum Data Solutions *Jun 2019 - Dec 2021 | Austin, TX*

* Developed high-throughput REST and gRPC microservices in Java and Spring Boot for financial fraud detection pipelines.
* Implemented real-time transaction validation system with 99.95% accuracy using Apache Flink and Kafka Streams.
* Optimized complex PostgreSQL query execution plans and partitioned database tables, decreasing batch processing times by 55%.
* Automated CI/CD workflows using GitHub Actions and Docker, reducing team deployment cycle duration from 2 hours to 15 minutes.

Associate Software Engineer - Apex Fintech Labs *Jul 2018 - May 2019 | Austin, TX*

* Built internal developer portal and API monitoring dashboards using Python (Flask) and React.
* Created end-to-end integration and load testing suites with Locust and PyTest, discovering critical concurrency bottlenecks before production.
* Collaborated with cross-functional product and security teams to resolve OWASP Top 10 vulnerabilities across legacy web applications.

KEY PROJECTS

Distributed Key-Value Store (Raft) (Go, Raft, Distributed Consensus, gRPC)

* Implemented a fault-tolerant, replicated key-value storage engine in Go using the Raft
* consensus algorithm with log compaction and snapshotting.

High-Throughput Log Aggregator (Kafka, Rust, Elasticsearch, Docker)

* Built an asynchronous log aggregation agent in Rust and Kafka delivering sub-second log
* indexing into Elasticsearch.

EDUCATION

B.S. in Computer Science - University of Texas at Austin May 2018

Details: Dean's Honor List, Distributed Systems Lab

CERTIFICATIONS

AWS Certified Solutions Architect - Associate * Certified Kubernetes Application Developer (CKAD)
